Professional Summary

Electronics Engineer specializing in Embedded Systems, Linux Kernel Development, and Bootloader Customization. Experienced in USB driver development, kernel-to-user space communication, and low-level hardware interactions. Skilled in C, C++, and microcontroller programming with strong expertise in UART, I2C, SPI, and CAN protocols. Hands-on experience with ESP32, Raspberry Pi, and NRF SDK for real-time and AI-powered applications. Currently completing professional Embedded Systems training at Vector India.

Experience

- Embedded Systems Intern

NXON AI Pvt. Ltd. | Nov 2024 – Mar 2025

- Developed firmware for real-time applications on ESP32 & Raspberry Pi.
- Worked on Linux kernel modules and device driver development.
- Customized U-Boot bootloader for Raspberry Pi, enabling custom boot configurations.
- Implemented low-latency audio streaming and firmware optimization.

Training

- Embedded Systems Training (Ongoing)

Vector India | Mar 2025 – Present

- Worked on low-level firmware development and hardware-software integration.
- Built projects using C, C++ with UART, I2C, SPI, and CAN communication protocols.
- Hands-on with RTOS, device drivers, and embedded C projects.

Education

- Bachelor of Engineering – Electronics & Communication, L.J. University | CGPA: 7.5 | 2022 – 2025
- Diploma in Electronics & Communication, L.J. Polytechnic | CGPA: 6.5 | 2019 – 2022

Skills

Languages: C, C++, Embedded C, Shell scripting
Protocols: UART, I2C, SPI, CAN, USB
Platforms: ESP32, Raspberry Pi, ARM7 (LPC), NRF SDK
Systems: Embedded Linux, U-Boot, FreeRTOS
Tools: Git, PlatformIO, Keil, GCC, GDB, USB analyzers
